

WE'RE FLYING. TOGETHER.

ASTUTE ELECTRONICS LTD SIGN UK DISTRIBUTION AGREEMENT WITH LINEAR TECHNOLOGY CORPORATION

Astute will be taking on the responsibility for developing sales for Linear Technology's high performance analog products through our existing, defence-biased customer base as well as uncovering new opportunities within the military and aerospace environment.

THE NEXT LEVEL

Linear Technology Corporation (Milpitas, California) provides customers with high performance analog products, including

amplifiers, comparators, voltage references, monolithic filters, linear regulators, DC/DC converters, battery chargers, data converters, communications interface circuits, RF signal conditioning circuits, μ Module[®] products, and many other analog functions.

Astute are delighted to be partnering with such a prestigious component manufacturer. The partnership brings the perfect combination of Astute's strong commercial relationships together with Linear Technology's application and design support of their extensive range of analog semiconductors, which are well suited to demanding defence-related end equipment.

Such a cooperation also aligns well with Astute's policy of offering supply-chain improvement programmes. On the back of receiving the prestigious SC21 Bronze Award (Astute being the only UK component distributor to achieve this level!) this demonstrates our substantial commitment to supporting the UK's Defence market.
